

BizTalk Performance Assistant

Detect, Measure, Analyze, Resolve, Improve

What is Enkay BizTalk Performance Assistant (BPA)?

Enkay BPA is an expert system that is continuously monitoring Microsoft BizTalk Server Enterprise Service Bus (ESB) infrastructure and provides prescriptive guidance on how to resolve performance issues when it discovers throttling incidents.

Enkay BPA includes knowledge that a BizTalk Architect would have, and has automated data collection and analysis so that our customers can rapidly identify performance bottle-necks. BPA sends alerts to the customer when it detects performance issues as BPA is constantly monitoring in real-time performance counters for BizTalk and checking them against thresholds. Once the customer receives an alert, they can get details on the issue from BPA including guidance on how to fix the issue. Enkay BPA is used not only for Production infrastructure monitoring activities but is also a very useful tool for performance benchmarking and baselining. It maintains historical data so that the customer can go back in time and review performance results both before and after infrastructure or application changes have been made. By incorporating Search, Export to Excel and graphical features, Enkay BPA is an easy to use tool that helps our customers and Enkay Managed Services teams reduce costs and improve effectiveness of their Microsoft BizTalk ESB.

What does BPA do?

Proactively monitors your systems

Helps **Performance Benchmarking**

Provide **Detailed Guidance on how to resolve performance issues**

Search for keywords based on previous Alerts that have been captured by BPA

Provide **expert knowledge** to reduce costly down time and meet SLA

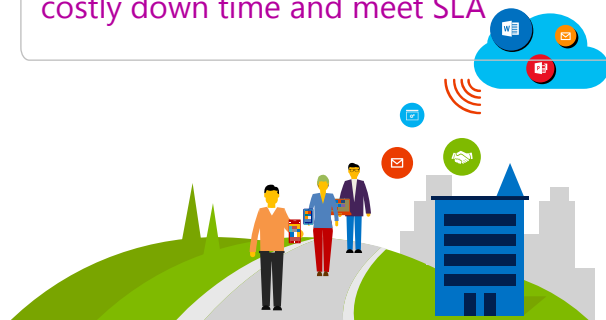

Why Enkay?

Our Enkay BPA tool can help our customers reduce down time due to performance issues that are typically difficult to detect and analyse.

As integration specialists, we have captured years of BizTalk knowledge in the BPA tool, and continue to update it with new knowledge based on real-world issues that our BizTalk Architects have helped resolved at our customer engagements. We have a proven record of successfully helping our customers reduce operational costs, improve efficiency and meet uptime SLAs by recommending changes based on best practices that we've curated over multiple successful engagements.

Our Enkay BPA tool will allow you to meet your business SLAs while allowing you to focus on your core business. Contact us at info@enkaytech.com or **800-400-2406**.

"Very helpful tool!!" - Sr. Manager, App Support, at a large Midwest Insurance Company
