

BizTalk Performance Monitor

Monitor, analyze and resolve performance issues

What is it?

Enkay's BizTalk Performance Monitor (BPM) is a free tool when used as part of Enkay Managed Services. It helps your operations team by continuously monitoring the performance of your BizTalk Server environments (applications and infrastructure). When performance issues are detected, or if failures are detected that impact Service Level Agreements (SLAs), BPA fires alerts so that the someone can act on the issue. An operator can then use BPM to gain visibility into what could be impacting performance, and guidance on how to fix it. When business is impacted by poor BizTalk performance, people lose confidence in BizTalk and question the value of their investment.

BPM includes knowledge that a BizTalk Architect would have, and has automated data collection and analysis so that the user can rapidly identify performance bottle-necks. BPM is also a very useful tool for performance benchmarking and baselining, as it maintains historical data so that you can go back in time and review performance results, both before and after infrastructure or application changes have been made. With an easy to use graphical user interface, BPM helps operations management teams reduce costs and improve effectiveness of their mission critical BizTalk Server implementations, and helps ensure SLAs are being monitored and met.

What does BPM do?

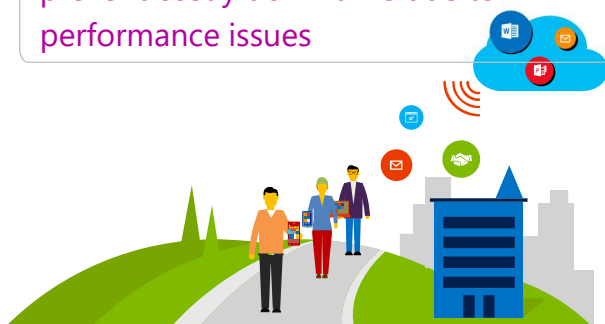

Proactively monitors your systems

Helps Performance Benchmarking

Provide Detailed Guidance on how to resolve performance issues

Compare performance based on previous environment configuration

Provide expert guidance on how to prevent costly down time due to performance issues

Why Enkay?

BPM helps our customers reduce down-time due to performance issues that are typically difficult to detect and analyse.

As integration specialists, we have captured years of BizTalk knowledge in the BPM tool, and continue to update it with new knowledge based on real-world issues that our BizTalk Architects have helped resolve at customer engagements. We have a proven record of successfully helping our customers reduce operational costs, improve efficiency and meet uptime SLAs by recommending changes based on best practices that we've curated over multiple successful engagements.

Our Enkay BPM tool will allow you to meet or exceed your business needs by allowing you to detect issues before your customers are impacted by them. Contact us at info@enkaytech.com or toll free at **1-800-400-2406**.

"Very helpful tool!!" - Sr. Manager, App Support, at a large Midwest Insurance Company
